Introduction
SmartX IP Controller – MP-C is a multi-purpose, fully programmable, IP based field controller. The MP-C models offer a flexible mix of I/O point types that suit a wide range of HVAC applications. MP-C can either be used as a standalone BACnet/IP field controller or as part of an EcoStruxure BMS with a SmartX AS-P or AS-B server or an Enterprise Server as the parent server. The MP-C models support an optional display that provides insight and control of the inputs and outputs.

The MP-C has the following features:
- IP enabled with dual port Ethernet switch
- Versatile onboard I/O point mix
- High reliability
- Sensor bus for living space sensors
- Mobile commissioning application
- Full EcoStruxure Building Operation software support, providing efficient engineering tools

IP connectivity and flexible network topologies
The MP Series controllers are based on open protocols that simplify interoperability, IP configuration, and device management:
- IP addressing
- BACnet/IP communications
- DHCP for easy network configuration

The MP Series controllers have a dual-port Ethernet switch, which enables flexible network topologies:
- Star
- Daisy chain
- Rapid Spanning Tree Protocol (RSTP) ring

In a star topology, the controller and the parent EcoStruxure BMS server are individually connected to an Ethernet switch. You can reduce the installation time and cost by daisy-chaining multiple controllers together. You can use an RSTP ring topology when you want failures of a single controller to be detected and recovered quickly and efficiently.

Models with a versatile mix of I/O points
MP-C comes in five models with different I/O point count and a versatile mix of I/O point types that match a wide variety of applications. Most of the I/O points are universal inputs/outputs, which are highly flexible and can be configured as either inputs or outputs.

a) Not suitable as Pulse Width Modulated (PWM) outputs.
Universal inputs/outputs
The universal inputs/outputs are ideal for any mix of temperature, pressure, flow, status points, and similar point types in a building control system.

As counter inputs, the universal inputs/outputs are commonly used in energy metering applications. As RTD inputs, they are ideal for temperature points in a building control system. As supervised inputs, they are used for security applications where it is critical to know whether or not a wire has been cut or shorted. These events provide a separate indication of alarms and trouble conditions to the system.

For all analog inputs, maximum and minimum levels can be defined to automatically detect over-range and under-range values.

The universal inputs/outputs can also be used as voltage outputs or current outputs (Uc only), without the need for external bias resistors. Therefore, the universal inputs/outputs support a wide range of devices, such as actuators.

Triac outputs
The triac outputs can be used in many applications to switch 24 VAC on or off for external loads such as actuators, relays, or indicators. The triac outputs are isolated from the controller. Triacs are silent and do not suffer from relay contact wear.

Relay outputs
The relay outputs support digital Form A point types. The Form A relays are designed for direct load applications.

High power relay output
MP-C-15A and MP-C-18A have a high power relay output, which is ideal for switching loads of up to 12 A, such as electrical heating elements.

High reliability
The MP Series controllers support local trends, schedules, and alarms, enabling local operation when the controller is offline or used in standalone applications.

The battery-free power backup of the memory and real-time clock prevents data loss and ensures seamless and quick recovery after a power failure.

All MP-C models can be equipped with the MP-C Display add-on module, which features an LCD display and five keys. With this module, you can manually override analog and digital outputs for testing, commissioning, and maintenance of equipment connected to the outputs. The module’s dedicated processing power ensures reliable override for maintenance applications. The override status is readable through EcoStruxure Building Operation WorkStation and WebStation, enabling precise monitoring and reliable control.

MP-C Display WorkStation allows you to update the firmware of multiple MP Series controllers at the same time and with minimum down time. The EcoStruxure BMS server keeps track of the installed firmware to support backup, restore, and replacement of the controllers and sensors. The server can host controllers of different firmware versions.

Sensor bus for living space sensors
The MP Series controllers provide an interface designed for the SmartX Sensor family of living space sensors. The SmartX Sensors offer an efficient way to sense the temperature, humidity, CO₂, and occupancy in a room. The SmartX Sensors are available with different combinations of sensor types and various covers and user interface options, such as touchscreen, setpoint and override buttons, and blank covers.
MP-C
SmartX IP Controller

SmartX Sensors

The sensor bus provides both power and communications for up to four sensors that are daisy-chained using standard Cat 5 (or higher) cables. The maximum number of sensors that can be connected to a controller varies depending on the sensor model and the combination of cover and sensor base type:

- Blank covers: Up to four sensors of any combination of sensor base types
- 3-button and touchscreen covers:
  - Up to two sensor bases with CO₂ option
  - Up to four sensor bases without CO₂ option
- SmartX LCD temperature sensors: Up to four sensors are supported

The maximum total length of the sensor bus is 61 m (200 ft). For more information, see the SmartX Living Space Sensors Specification Sheet.

Mobile commissioning application

The eCommission SmartX Controllers mobile application is designed for local configuration, field deployment, and commissioning of MP Series controllers. The mobile application reduces the commissioning time, allows flexibility in project execution, and eliminates dependencies on network infrastructure.

The mobile application is designed for use with Android, Apple (iOS), and Microsoft Windows 10 devices. For more information, see the eCommission SmartX Controllers Specification Sheet.

eCommission SmartX Controllers mobile app

Using the eCommission SmartX Controllers mobile application, you can connect to one or many MP Series controllers. You can connect to a single MP Series controller using the eCommission Bluetooth Adapter connected to a SmartX Sensor. You can connect to a network of MP Series controllers on the local IP network, using a wireless access point or a network switch.

Device configuration

With the eCommission SmartX Controllers mobile application, you can easily discover MP Series controllers on the IP network and change each controller's configuration, including the BACnet and IP network settings, location, and parent server. To save engineering time, you can save common device settings and then reuse them for controllers of the same model.

Field deployment and I/O checkout

The eCommission SmartX Controllers mobile application does not require an EcoStruxure BMS server or a network infrastructure to be in place. You can use the mobile application to load the controller application directly into the local MP Series controller and deploy the controller. The controller application can be created offline using Project Configuration Tool or WorkStation. You can also perform an I/O checkout to ensure that the controller's I/O points are configured, wired, and operating correctly.
Full EcoStruxure Building Operation software support

The power of the MP Series controller is fully realized when it is part of an EcoStruxure BMS, which provides the following benefits:

- WorkStation/WebStation interface
- Script and Function Block programming options
- Device discovery
- Engineering efficiency

WorkStation/WebStation interface

WorkStation and WebStation provide a consistent user experience regardless of which EcoStruxure BMS server the user is logged on to. The user can log on to the parent EcoStruxure BMS server to engineer, commission, supervise, and monitor the MP Series controller and its I/O as well as its attached SmartX Sensors. For more information, see the WorkStation and WebStation specification sheets.

Script and Function Block programming options

Unique to the industry, the MP Series controllers have both Script and Function Block programming options. This flexibility assures that the best programming method can be selected for the application. Existing programs can easily be reused between the EcoStruxure BMS server and the controller.

Device discovery

The enhanced Device Discovery in WorkStation enables you to easily identify MP Series controllers on a BACnet network and to associate the controllers with their parent server.

Engineering efficiency

The engineering and maintenance of MP Series controllers can be done very efficiently using the EcoStruxure Building Operation reusability features. With these features, you can create library items (Custom Types) for a complete controller application that contains programs and all necessary objects such as trends, alarms, and schedules. The controller application in the Custom Types library is reusable across all controllers of the same model. You can use the controller application as a base for creating new controllers intended for similar applications. You can then edit the controller application, and the changes are automatically replicated to all controllers, while each controller keeps its local values.

WorkStation supports both online and offline engineering of MP Series controllers. You can make the configuration changes online or use database mode to make the changes offline. In database mode, the changes are saved to the EcoStruxure Building Operation database so that you can apply the changes to the controllers later.

Project Configuration Tool enables you to perform all the engineering off site, without the need for physical hardware, which minimizes the time you need to spend on site. You can run the EcoStruxure BMS servers virtually and engineer the MP Series controllers, before you deploy your server and controller applications to the servers and controllers on site. For more information, see the Project Configuration Tool specification sheet.

In addition, you can use Automated Engineering Tool to facilitate your engineering process when using MP Series controllers. This tool provides access to a library of standard controller applications. These standard applications can be quickly configured and customized using the wizards and mass edit functions provided in the tool and then loaded into your target server. The tool also enables the quick creation of your own templates based on MP Series controller applications that you have developed. This facilitates a standard approach and drives the ability to easily reuse and duplicate common controller applications. For more information, see the Automated Engineering Tool specification sheet.

**MP-C**

**SmartX IP Controller**

**RTD temperature wiring**
- Maximum wire resistance: 20 ohm/wire (40 ohm total)
- Maximum wire capacitance: 60 nF
- The wire resistance and capacitance typically corresponds to a 200 m wire.

**Voltage outputs**
- Range: 0 to 10 VDC
- Accuracy: +/-60 mV
- Resolution: 10 mV
- Minimum load resistance: 5 kohm
- Load range: ~1 to +2 mA

**Current outputs (Uc only)**
- Range: 0 to 20 mA
- Accuracy: +/-0.2 mA
- Resolution: 0.21 µA
- Load range: 0 to 650 ohm

**Relay outputs, DO**
- Channels, MP-C-15A: 3, DO5–DO7
- Channels, MP-C-18A: 4, DO1–DO4
- Channels, MP-C-24A: 8, DO1–DO8
- Contact rating: 250 VAC/30 VDC, 2 A, Pilot Duty (C300)
- Switch type: Form A Relay, Single Pole Single Throw, Normally Open
- Isolation contact to system ground: 3000 VAC
- Cycle life (Resistive load): At least 100,000 cycles
- Minimum pulse width: 100 ms

**High power relay outputs, DO**
- Channels, MP-C-15A: 1, DO7
- Channels, MP-C-18A: 1, DO8
- Channels, MP-C-18B: 0
- Channels, MP-C-24A: 0
- Channels, MP-C-36A: 0
- Contact rating: 250 VAC/24 VDC, 12 A, Pilot Duty (B300)
- Switch type: Form A Relay, Single Pole Single Throw, Normally Open
- Isolation contact to system ground: 5000 VAC
- Cycle life (Resistive load): At least 100,000 cycles

**Loadrange:**
- Maximum wire capacitance: 60 nF
- Maximum wire resistance: 20 ohm/wire (40 ohm total)
- The wire resistance and capacitance typically corresponds to a 200 m wire.

**Resolution:**
- Current outputs: 21 µA
- Voltage outputs: 10 mV
- Accuracy: +/-0.2 mA
- Load range: 0 to 650 ohm

**Current outputs (Uc only):**
- Range: 0 to 20 mA
- Accuracy: +/-0.2 mA
- Resolution: 0.21 µA
- Load range: 0 to 650 ohm

**Relay outputs, DO:**
- Channels, MP-C-15A: 3, DO5–DO7
- Channels, MP-C-18A: 4, DO1–DO4
- Channels, MP-C-24A: 8, DO1–DO8
- Contact rating: 250 VAC/30 VDC, 2 A, Pilot Duty (C300)
- Switch type: Form A Relay, Single Pole Single Throw, Normally Open
- Isolation contact to system ground: 3000 VAC
- Cycle life (Resistive load): At least 100,000 cycles
- Minimum pulse width: 100 ms

**High power relay outputs, DO:**
- Channels, MP-C-15A: 1, DO7
- Channels, MP-C-18A: 1, DO8
- Channels, MP-C-18B: 0
- Channels, MP-C-24A: 0
- Channels, MP-C-36A: 0
- Contact rating: 250 VAC/24 VDC, 12 A, Pilot Duty (B300)
- Switch type: Form A Relay, Single Pole Single Throw, Normally Open
- Isolation contact to system ground: 5000 VAC
- Cycle life (Resistive load): At least 100,000 cycles

Thewire resistance and capacitancetypically corresponds to a 200 m wire.
**MP-C**

SmartX IP Controller

Minimum pulse width ..............................................................................................................................................100 ms

**Triac outputs, DO**

Channels, MP-C-15A ............................................................................................................................................. 6, DO1–DO6
Channels, MP-C-18A ............................................................................................................................................. 4, DO1–DO4
Channels, MP-C-18B ............................................................................................................................................. 8, DO1–DO8
Channels, MP-C-24A ............................................................................................................................................. 0
Channels, MP-C-36A ............................................................................................................................................. 0

Output rating (for each triac output) ................................................................................................................ Max. 0.5 A

Voltage......................................................................................................................................................24 VAC +/-20 %

Commons ........................................................................................................................COM1 for DO1 and DO2 (on MP-C-15A, -18A, -18B)
........................................................................................................................COM2 for DO3 and DO4 (on MP-C-15A, -18A, -18B)
........................................................................................................................COM3 for DO5 and DO6 (on MP-C-15A, -18B)
........................................................................................................................COM4 for DO7 and DO8 (on MP-C-18B only)

The common terminals can be connected to 24 VAC or to ground.

Common voltage, high side output.............................................................................................................24 VAC
Common voltage, low side output .............................................................................................................0 VAC (ground)

Minimum pulse width ..................................................................................................................100 ms

Triac output protection..........................................................................................................................MOV and snubber across each triac output
........................................................................................................................................................MOV from triac COM to ground

**Terminals**

Be sure to follow proper installation wiring diagrams and instructions, including these instructions:

- All MP-C models have several RET terminals for connection of I/O returns, so a common chassis/signal ground rail is optional and may not be needed.
- Individual 24 VDC power sources to the field must be current limited to maximum 4 A for UL compliant installations, and maximum 6 A in other areas.
- For more information on wiring, see Hardware Reference Guide.

Regulatory Notices

Federal Communications Commission
FCC Rules and Regulations CFR 47, Part 15, Class B
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference. (2) This device must accept any interference received, including interference that may cause undesired operation.

Industry Canada
This Class B digital apparatus complies with Canadian ICES-003.
Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Regulatory Compliance Mark (RCM) - Australian Communications and Media Authority (ACMA)
This equipment complies with the requirements of the relevant ACMA standards made under the Radiocommunications Act 1992 and the Telecommunications Act 1997. These standards are referenced in notices made under section 162 of the Radiocommunications Act and 407 of the Telecommunications Act.

CE - Compliance to European Union (EU)
2014/30/EU Electromagnetic Compatibility Directive
2014/35/EU Low Voltage Directive
2011/65/EU Restriction of Hazardous Substances (RoHS) Directive
This equipment complies with the rules, of the Official Journal of the European Union, for governing the Self Declaration of the CE Marking for the European Union as specified in the above directive(s) per the provisions of the following standards: EN 60730-1, EN 60730-2-11, and EN 50491-3 Safety Standards.

WEEE - Directive of the European Union (EU)
This equipment and its packaging carry the waste of electrical and electronic equipment (WEEE) label, in compliance with European Union (EU) Directive 2012/18/EU, governing the disposal and recycling of electrical and electronic equipment in the European community.

UL 916 Listed products for the United States and Canada, Open Class Energy Management Equipment. UL file E80146.
