

# Vigilohm in Network Management System

May 2018

Presented by: Presenter's Name

# Simple remote monitoring

## Value propositions

### 1. Remote Monitoring of real-time value and current healthy/faulty conditions:

- Com'X web Pages

### 2. Event notification:

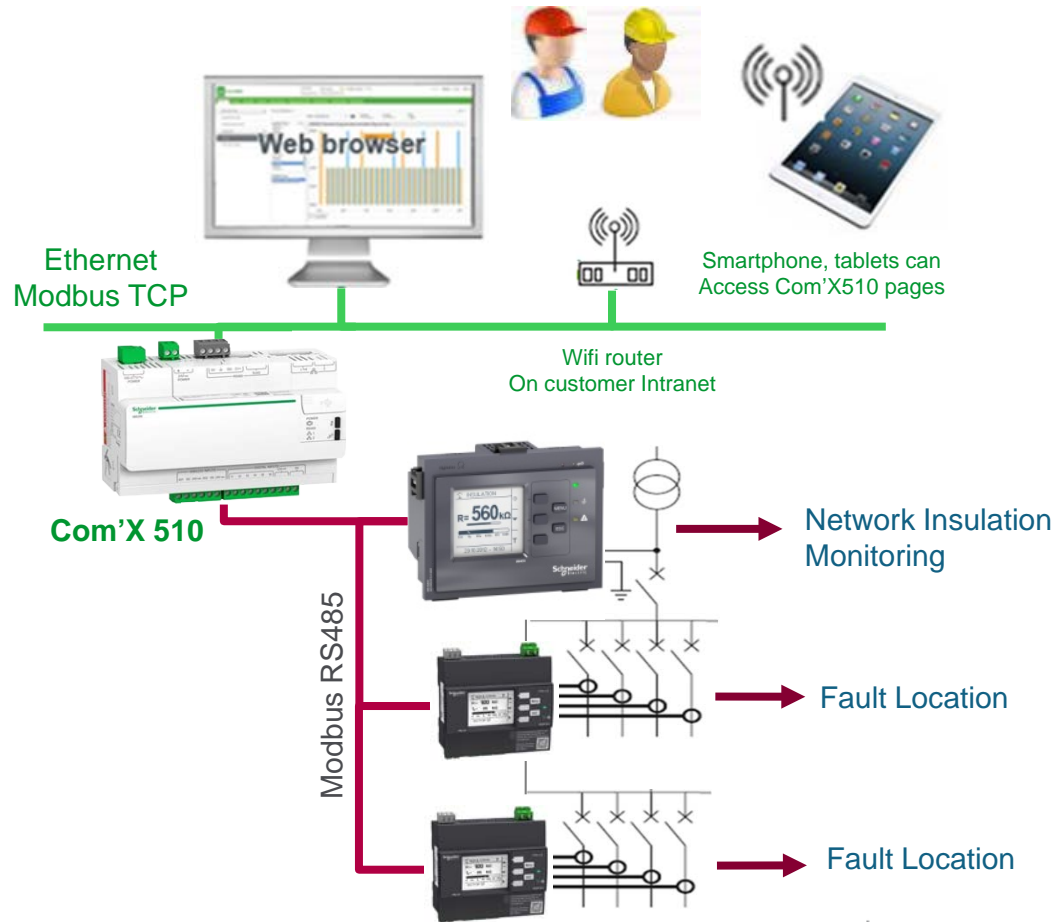

- Alarm in case of “insulation fault” with “fault location”

### 3. Com'X event notification:

- Data and Event storage: Com'X data storage
- Data (R&C) history trending for preventive maintenance
- Event Logging with time-stamp » : Correlation with other events on the site for troubleshooting

### 4. Remote Configuration: Com'x web pages

### 5. Maintain device time

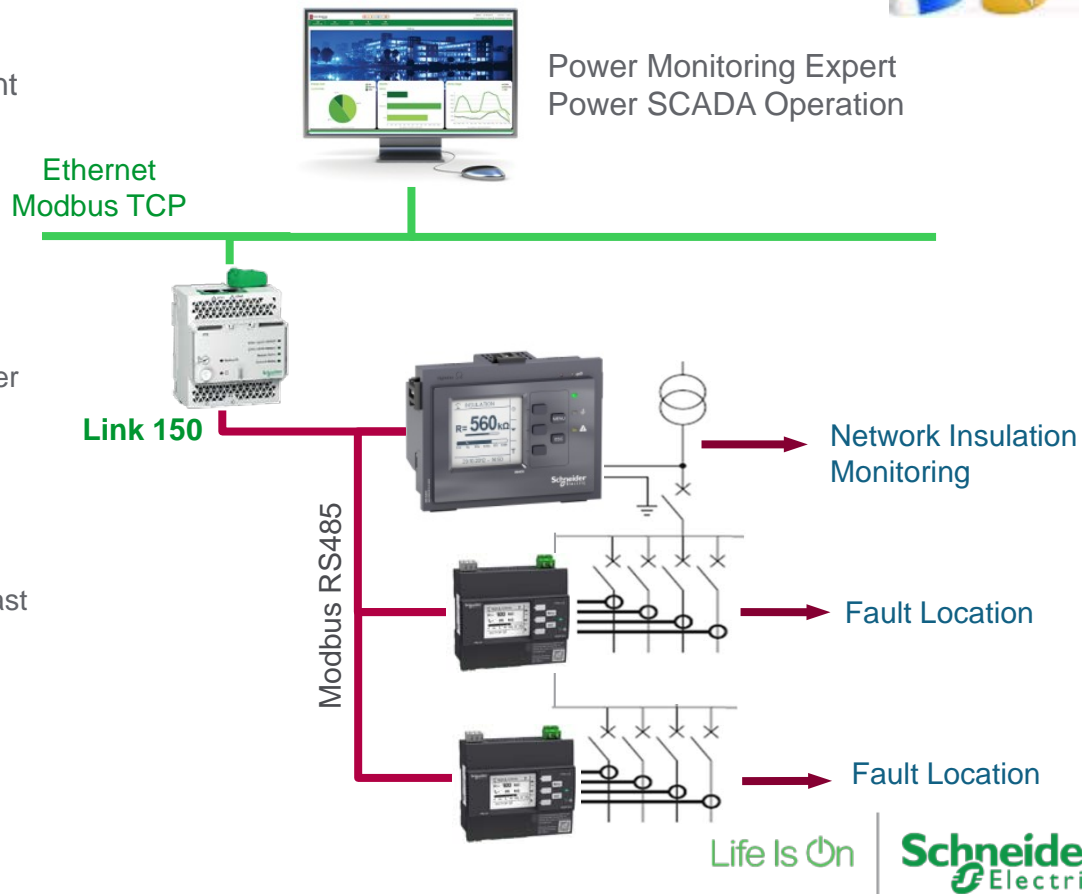

# Integrated in EcoStruxure PME/PSO architecture

## Value propositions

- 1. Remote monitoring** of real-time value and current healthy/faulty conditions
- 2. Event notification:** alert in case of “insulation fault” with “fault location”
- 3. Data and event storage**
  - Data (R&C) history trending for preventive maintenance
  - Event logging with time-stamp: correlation with other site events for troubleshooting
- 4. Remote configuration**
- 5. Configuration of IFL/IMD device parameter**
- 6. Report generation**
  - Generating reports on data history, event history, last user triggered self-test
- 7. Maintain device time**
- 8. Integration in customer network performance system (PSE/PME/...)**
  - Unlimited data storage
  - Fine timestamping
  - One system for network management
