- > Match Dtm feature for unidentified device reference.
- > Updated version of Modbus driver (V14.4).
- > Updated version of Modbus Library.

2.8 Features of V2.3

- > Updated version of Modbus Library.

2.9 Features of V2.1

- > Online Save of project configuration.
- > Updated version CANOpen Library.
- > Updated version of Modbus Library.
- > Updated version of Modbus driver.

2.10 Features of V2.1

- > New device selection screen with device icons grouped according to device type and custom.
- > Improved device scan window.
- > List of installed DTM's in the start page.

2.11 Features of V2.0

- > Improved connection configuration which gives better device identification in supported network.
- > Option to choose between "Upload and connect" or "Download and Connect" of the configuration when the Connect button is clicked.
- > Updated tool bar icons.

3. Some Restrictions

- > In the second instance of the SoMove application, Devices connected on Modbus Serial Link / CANOpen / Bluetooth communication do not work if the same COM Port is used in other instance.
- > SoMove will not run properly if Chinese fonts are not available in the system. You need to relaunch the application and the language will be English by default. You may change the language after this relaunch.
- > Com port setting are disabled sometimes (Random behaviour).

- > SoMove crashes with COM port configured to COM3 in some laptops.
- > SoMove Installation will not work in Chinese Windows XP machine.
- > Manual device catalog update is required once for CANOpen connection.
- > Running SoMove on any version of Windows XP is not supported.

4. Troubleshoot

4.1 Concurrent Connection on Modbus Serial Link

The maximum number of concurrent Modbus connections is limited to four connections. After installation of the Modbus Driver, one Modbus connection is created by default

If more connections are required, perform the following steps:

- > Open the Windows Control Panel.
- > Double-click the Driver Manager icon.
- > Open the Modbus Serial Driver tab Configure and start all four instances of the Modbus serial PC driver.
- > Check if all instances are running (four icons of the Modbus serial driver in the system tray).

NOTE: To perform these steps, administrator access rights are required.

4.2 Connection lost in Serial Communication

In Case of “Connection Lost” when using Serial Communication, configure the Inter-Char Timeout from the Modbus Driver as follows:

- > Step1: Select the Modbus driver from the taskbar. The default settings for Inter-Char Timeout will be automatic.
- > Step2: Select the COM Port to be used and change the Inter-Char Timeout value to higher value. E.g. 50 ms.
