1. ABOUT THIS PAPER

The version of SoMachine V3.0 **PV:02** comes with a new Altivar Library that corrects some shortcomings of former versions.

In case a customer imports a SoMachine V3.0 project archive, which might contain an old version of the library, the new one will be accidentally overwritten.

This paper provides instructions how to restore the proper version of the Altivar Library.

2. DETAILED REPAIR INSTRUCTION

2.1. IDENTIFYING THE PROBLEM

The library's property sheet within the Library Manager cannot display different version of the Altivar Library.

To display the versions:

- (1) Launch the **Library Repository** dialog from the Tools main menu,

Description: Altivar Library for SoMachine V4.2.5.0+
FixRevision: HotFix_1

- (2) In addition, the subversion of e.g. the Altivar 31 Control function is labeled as **V006 / November 2011** in the **Documentation** sheet of that device function.

In case the Altivar Library gets overwritten by an older one – for example as a result of an import of an project archive that contains an older library version – any attempt to compile a project that contains this library results in a build error message:

Outdated library version, please install the last update on www.schneider-electric.com or contact us.

Revisiting the information mentioned in steps 1 to 4 from above you will now see different details.

2.2. SOLVING THE PROBLEM

Please follow the instructions given according to your different use case to get the correct library restored:

- (1) In case the library update was done as a fresh install from DVD the user has to reapply the patch SoMaV3.0 Altivar Library Update 4.2.5.0+.msp provided on root directory of the distribution media.
- (2) In case the original SoMachine installation was updated via SESU and the user did not save a backup copy of the patch, the user must reinstall the installation patch from PI@net or Schneider-Electric.com.

3. OTHER INFORMATION

All the SoMachine DVD ordered from November 2011 (PV:02 or more) has the patch directly embedded: no need to reinstall the patch (except if the Altivar Library gets overwritten by an older one as described above).
