

Automatic Transfer Switch AP4423

Overview

The APC by Schneider Electric Rack Automatic Transfer Switch (ATS) provides reliable, redundant power to single-corded equipment loads, such as servers. The Rack ATS has two input power cords supplying power to the connected loads. If the primary source becomes unavailable or out of the selected range, the Rack ATS will seamlessly source power from the secondary source without interrupting critical loads.

The Rack ATS has built-in network connectivity, which allows for remote management via Web, Telnet, SNMP, SSH or StruxureWare Data Center Expert® interfaces.

Inlets: The two (2) C20 inlets support the connection of two power cords (not provided) to link the ATS to two separate power sources (A, B). The switch draws power from the preferred source and automatically switches to the secondary source when necessary.

Outlets: The outlets connect the ATS to equipment in the rack or enclosure, providing a redundant source of power to the connected equipment. The switch has eight (8) C13 outlets and one (1) C19 outlet.
