TESTED VALIDATED

DOCUMENTED ARCHITECTURE : Distributed / Modbus TCP / Logic Controller M251

PLANT DESIGNATION : TVDA
DRAWING NUMBER : EIO0000001822.01

DEPARTMENT : Industry Business
PRODUCT DOMAIN : TVDA

CAE SYSTEM : ePlan P8 V 2.4.4
RELATED PRODUCTS : Logic Controller M251; Magelis HMIGTO; TM3 I/O-Expansion; iEM3150; Harmony ZBRN1; Altivar 32; Lexium 32M; TeSysU

INCOMING SUPPLY	: 400V 3~, N, PE, 50Hz
FEEDER	: Oelflex Classic 100 5G2,5mm²
POWER INPUT	: 3,90 kW
CONTROL VOLTAGE	: 24V dc
MANUFACTURING DATE	: 2013
CABINET TYPE	: Spacial, RAL 7035
CHECKED TO	: IEC 60364

RESPONSIBLE FOR PROJECT : Machine Solutions
CREATOR : TVDA
DATE CHANGED : 2015/11/13

The information, program and configuration contained herein are provided as general training on the products concerned, in part, by way of theoretical and/or hypothetical examples. Only you, the user, can be aware of all the conditions and factors present during setup, operation, and maintenance of your machine and its application; therefore, only you, the user, can determine the automation equipment and the related safeties and interlocks which can be properly used. When selecting automation and control equipment and related software for a particular application, you must refer to the applicable local and national standards and regulations.

General project information

Equipment Grounding

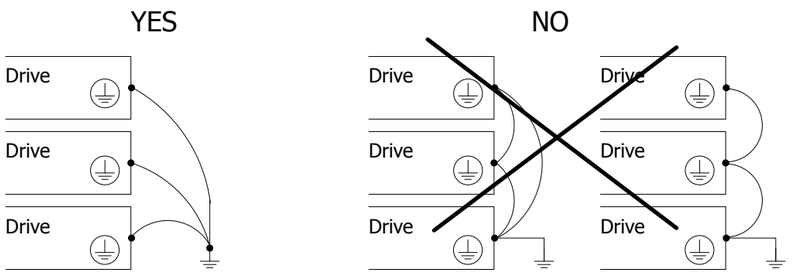
Secure the ground connection of the devices to the protective ground (PE) of your panel at a single point and in conformance with local and national electrical code requirements. Depending on these local and national code requirements, a minimum wire section (gauge) of 10 mm² (6 AWG) may be required to meet standards limiting leakage current.

⚠ DANGER

ELECTRIC SHOCK

- Properly ground your panel and equipment before applying power.
- Always comply with local wiring requirements regarding grounding cables and grounding cable shields.
- Ground devices independently at a single point.

Failure to follow these instructions will result in death or serious injury.



- Ensure that the resistance of ground is one ohm or less.
- When grounding several drives, you must connect each one directly, as as shown in the figure to the left.
- Do not loop the ground cables or connect them in series.

General project information

⚠ DANGER

LOSS OF CONTROL, ELECTRIC SHOCK, EXPLOSION OR ARC FLASH

- The designer of the machine and its control system must consider their potential failure modes and provide a means to achieve a safe state during and after a failure by installing and thoroughly testing security control devices.
- Power line and output circuits must be wired and fused in compliance with local and national regulatory requirements for the rated current and voltage of the particular equipment.
- The designer of the machine and its control system is responsible for compliance with all international and national electrical standards in force concerning protective grounding of all equipment.

Failure to follow these instructions will result in death or serious injury.

⚠ WARNING

REGULATORY INCOMPATIBILITY

Be sure that all equipment applied and systems designed comply with all applicable local, regional, and national regulations and standards.

Failure to follow these instructions can result in death, serious injury, or equipment damage.
