

Grid System

Installation Instructions

AR1608 Ed C

Grid frames Ultimate ref: GUG1GR, GUG2GR, GUG3GR, GUG4GR

These grid frames are fitted with end tabs, which can be bent or removed to enable compatibility with all styles of cover plates and flush or surface boxes.

When installing grid frames in Metalclad surface boxes ensure all end tabs are removed and supplied plastic mounting spacers are fitted over grid frame fixing screws.

Spacers will provide the required mounting height for fitted grid modules and neat and easy fixing of the grid cover plates.

For installations with more than one grid frame, it is important that all the grid frames are effectively connected to earth via their own respective earth terminals.
