

Universal Notebook Battery (UPB60)

User's Manual

Introduction

Thank you for purchasing APC's Universal Notebook Battery (model UPB60). Please read the entire user manual prior to use. Fill out and mail the enclosed Warranty Registration Card, or register this purchase online at www.apc.com.

APC's Universal Notebook Battery is a slim and lightweight external battery pack which provides up to 6-hours of continuous runtime (actual runtimes may vary by notebook model and power setting).

Features

- Ultra-lightweight construction reduces bulk and weight in notebook carry-on luggage.
- Wide range of selectable output voltages power most notebook computers.
- Four charge/discharge level indicators.
- Letter-coded power tips provided compatibility with most notebook computers (see Compatibility Guide).
- Compatible with APC's TravelPower Adapter and Universal Power Adapter models.
- Up to 70 Watts continuous power, up to 90 Watts peak power output.
- Up to 6 hours of continuous runtime for your notebook.

Inspection

Check the package contents for the following items:

- APC Universal Notebook Battery (UPB60)
- Input/Output UPB60 Power Cable
- Conversion Plug and Jack Package
- Compatibility Guide
- User's Manual
- Warranty Card
- Voltage and Tip Label
- Rubber "Feet" (4)

If any item listed above is not in the package, please contact APC Customer Service at 800-800-4APC for further assistance..

Safety Precautions

Please read the following warnings carefully before using the UPB60 Universal Notebook Battery. Use the product correctly and according to the procedures described in this manual.

WARNINGS

- Do not attempt to disassemble or alter any part of this product.
- Do not store outside of the following temperature range: -4 to 140°F (-20 to 60°C). Do not operate outside of the following range: 32-104°F (0 to 40°C), as this will damage or reduce the life of the battery.
- Do not allow this product to have contact with water or other liquids. If water or other liquids enter the battery interior, immediately unplug the product from the notebook. Continued use of the product may result in fire or an electrical shock.
- Do not place this product near a heat source or expose the battery to direct flame or heat, as the battery may explode.

Prior to Use

Before using the UPB60 it should be fully charged. Please follow the instructions below on how to use and maintain the UPB60.

1 Finding the Notebook Voltage Setting

Before using this battery, determine the DC input voltage requirement for the notebook being used. Notebook voltage ratings are usually indicated in one of two locations: at the back of the notebook on the system label or on the notebook AC-to-DC power adapter label.

If the voltage cannot be located, refer to the "Compatibility Guide" to determine the required setting for the notebook being used.

2 Output Voltage Setting

Please refer to Figure 1 to become familiar with all aspects of the UPB60.

To set the voltage output for the UPB60, proceed as follows:

1. Locate the input voltage requirement for your notebook computer. (Refer to "Finding the Notebook Voltage Setting" for instructions).
2. Remove the yellow sticker on the UPB60 which covers the Output Voltage Selector Switch.
3. Turn the Output Voltage Selector Switch to the required voltage setting for the notebook being used.
4. Press the "On/Status" button to make the change effective. **Note:** If this is the first time using the battery, attach a power source to wake up the battery. Continue reading the manual for further instructions on first use.

3 Changing the Voltage While the Battery is in Use

If the voltage selector dial is moved while the battery is in use, the battery will interrupt the output of power to your notebook computer. To resume power output, ensure that the voltage selector is turned to the correct output voltage (please refer to the Notebook Users Manual for instructions). Press the **On/Status** push button for approximately 1 second, then release. The **On/Status** indicators will illuminate, indicating the battery has resumed power output.

4 Charging and Connecting the UPB60

Prior to use, completely charge the UPB60. Follow the instructions for setting the output voltage on the UPB60. Provided with the UPB60 is a plastic bag with an assortment of plug and jack tips. Plug and jack tips are each marked with a letter designator which corresponds to notebook models listed in the "Compatibility Guide" and "Compatibility" section of this manual. Plug tips are used to connect the output power of the UPB60 to the input DC voltage port on the notebook. Jack tips are used to connect the UPB60 to a power source (notebook's AC/DC Power Adapter, or APC's TravelPower or Universal Power Adapters - purchased separately). Tips are marked with an uppercase letter (A, B, C, etc.). Jacks are marked with a lowercase letter (a, b, c, etc.).

Example: An IBM® X31 uses plug tip "B" and jack tip "b". An Acer Travel Mate® uses plug tip "K" and jack tip "k", etc. The letter designators correspond to notebook models listed in the "Compatibility Guide" and "Compatibility" section of this manual. To make connections, refer to Figures 1 and 2, then proceed as follows:

1. Attach the appropriate Jack tip to the UPB60 Input Power Connector.
2. Attach the Plug tip to the UPB60 Output Power Connector.
3. Attach the notebook power adapter, APC TravelPower Adapter, or Universal Power Adapter to the UPB60 Jack tip.
4. The UPB60 **Status** indicators should illuminate. If they do not, ensure the notebook power adapter is connected to a power source, and any switch controlling the power source is in the **ON** position.

5. When the **Status** indicators illuminate, the UPB60 is charging. Continue charging the UPB60 until all indicators illuminate and then extinguish.

6. Check the UPB60 capacity. Press the **On/Status** push button. The **Status** indicators on the UPB60 will light and stay lit for about 5 seconds. If this is the first time using the battery, and all indicators do not light, fully charge the UPB60 before continuing.

7. The UPB60 is now ready for use. If the notebook power adapter, APC TravelPower Adapter, or APC Universal Power Adapter is present, the UPB60 will pass through power to the notebook. If the notebook power adapter is removed, the UPB60 will continue to provide power to the notebook, and the notebook will appear to be connected to utility power. To optimize runtime for the battery, adjust the notebook power settings to save power. See notebook user manual for information on changing power mode settings.

5 Turning On the UPB60

When the battery has been stored for more than 15 minutes, or has not been attached to a notebook, the battery will enter **Sleep Mode**. To turn the battery on, press the **On/Status** push button for 1 second, then release. The **Status** indicators illuminate, showing the battery is awake.

6 Checking UPB60 Status

You can check the status of the battery at any time. Simply press and hold the **On/Status** push button for 1 second, then release. The LED **Status** indicators will illuminate, indicating the charge level of the battery. Refer to Figure 3 for **Status** Indicator Definitions (when you turn on or check status of the battery, it will show the remaining charge level capacity).

Blue	● ● 30 - 60%	● ● ● 60 - 85%
Blue	● 10 - 30%	● ● ● ● 85 - 95%
Amber or Off	○ (amber) Less than 10%	○ ○ ○ ○ Fully Charged (Not Lit)

Troubleshooting

Problem	Possible Cause	Corrective Action
The UPB60 is not charging the notebook when the AC adapter is connected to the UPB60.	Notebook AC Adapter output voltage does not match the output voltage setting on the Output Voltage Selector Switch.	Check the voltage rating from the system label on the notebook or power adapter. Turn the Output Voltage Selector Switch to the corresponding voltage. Disconnect and reconnect the UPB60 Power Cable from/to the UPB60.
No power after performing the above procedure.	The actual voltage produced by the notebook AC adapter is offset from its rating.	Disconnect the Power Cable from the UPB60. Turn the Output Voltage Selector Switch to the next highest voltage setting. Example: if the notebook AC adapter is 15V, turn the Output Voltage Selector Switch to 16V.
	The notebook is an Acer model, and is listed in the "Compatibility Guide" and the "Compatibility" section of this manual.	Disconnect the UPB60 Power Cable; set the Output Voltage Selector Switch to 20V. Connect the UPB60 Power Cable to the notebook.
UPB60 does not charge the notebook when the AC adapter is NOT connected.	The Output Voltage Selector Switch is not set to the correct voltage setting.	Check the notebook, notebook power adapter, "Compatibility Guide" or "Compatibility" section of this manual to ensure the appropriate voltage setting for the notebook is being used, and to ensure the proper jack tip and plug tip are being used.
	UPB60 has automatically shut down due to abnormally high temperature.	Remove the UPB60 from the enclosed area, and let it cool for a few minutes. Unplug and re-plug the UPB60 Power Cable. The unit will recover from thermal protection mode.
	The notebook being used is drawing more than 70W from the UPB60.	UPB60 is designed to deliver 70 Watts of continuous output power. Perform one of the following to resume UPB60 power output: 1. Fully charge the notebook internal battery using the adapter provided with the notebook; connect the UPB60 to the notebook. 2. Change the power settings on the notebook to conserve battery power.
No power from the UPB60 after being disconnected from a notebook.	The UPB60 may have entered Sleep Mode .	Press the On/Status push button for 1 second, then release. The On/Status indicators will illuminate and the battery will resume power output. If no indicators are lit, charge the UPB60.

Battery Recycling, Storage, and Battery Life

The Universal Notebook Battery should be disposed of properly. Please do not dispose in trash receptacles or incinerate. For information about APC's battery recycling program, visit: mobilecomputing.apc.com.

For best results, do not store the UPB60 where there is excessive heat or cold, as such environments can damage the battery pack and reduce battery life. If storing the UPB60 for an extended period, completely discharge and recharge the unit before the next use. This can be done by attaching the UPB60 to a notebook and waiting until it is fully discharged. The UPB60 is fully discharged when the amber Status indicator is extinguished. Attach a notebook power adapter to the UPB60 and continue charging it until all Status indicators are extinguished. For best results, the UPB60 should be fully discharged and recharged once every 3 months. This will condition the cells inside the battery to ensure the UPB60 delivers the most capacity available.

Specifications

Item	Specification
Capacity	68 Watt-hours
Output Power	70 Watts Maximum Continuous Power 90 Watts Peak Power-short duration
Output Voltage	15V, 16V, 18V, 19V, and 20V DC
Input Power Source	Notebook adapters or APC's TravelPower or Universal Power Adapters.
Charge time	Recharges to 100% in 3 hours.
Size	10" x 6.5" x .65" (255mm X 165mm X 16.5mm)
Weight (including Power Cable)	1.83 lb (831g)
Environmental	Storage: -4 to 140°F (-20 to 60°C) Operation: 32 to 104°F (0 to 40°C)
Agency Approvals	UL, cUL, TUV/GS, and CSA Note: This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference which may cause undesired operation.

Limited Warranty

APC warrants its products to be free from defects in materials and workmanship under normal use and service for one (1) year from the date of purchase for the original purchaser. Its obligation under this warranty is limited to repairing or replacing, at its sole option, any such defective products. To obtain service under warranty you must obtain a Returned Material Authorization (RMA) number from APC or an APC Service Center with transportation charges prepaid and must be accompanied by a brief description of the problem and proof of date and place of purchase. This warranty applies only to the original purchaser.
