

Legendary ReliabilitySM

Tune-UPS

Symmetra® Power Arrays® Tune-UPS

APC's **Tune-UPS** is offered as a cost effective upgrade option for extending the life of your **Symmetra® Power Array®** and Extended Run Battery Frames. APC introduced Symmetra to the world in September of 1997. Many Symmetra owners are considering what to do with their systems that are out of warranty, getting older, and/or have reached the end of their depreciation schedule. If your application needs have not changed and the Symmetra is still the right solution for you, Tune-UPS could be just what you are looking for. Tune-UPS will allow you to “refresh” your system with the latest firmware, management, and hardware upgrades on site, while also providing a new two-year warranty.

Benefits to Customer:

- Provides new replacements of all critical components of your system including:
 - All power, battery and intelligence modules
 - Web/SNMP card
 - PowerView™ firmware
- For Extended Run Frames
 - All battery modules
- Provides the flexibility of 7X24 on-site installation scheduling by authorized APC service personnel
- Provides the added protection of a new two-year warranty
- Assurance that your system is in peak operating condition

Important Points:

- Customer must purchase one Tune-UPS per unit
- Customers with Symmetra XR Frames must purchase Tune-UPS for UPS and XR Frames simultaneously
- Please allow for a two-week lead time for installation scheduling
