Safety Information

Important Information

NOTICE

Read these instructions carefully and look at the equipment to become familiar with the device before trying to install, operate, service or maintain it. The following special messages may appear throughout this bulletin or on the equipment to warn of potential hazards or to call attention to information that clarifies or simplifies a procedure.

The addition of either symbol to a "Danger" or "Warning" safety label indicates that an electrical hazard exists which will result in personal injury if the instructions are not followed.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠ DANGER

DANGER indicates a hazardous situation which, if not avoided, will result in death or serious injury.

⚠ WARNING

WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.

⚠ CAUTION

CAUTION indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

NOTICE

NOTICE is used to address practices not related to physical injury. The safety alert symbol shall not be used with this signal word.

The information provided in this documentation contains general descriptions and/or technical characteristics of the performance of the products contained herein. This documentation is not intended as a substitute for and is not to be used for determining suitability or reliability of these products for specific user applications. It is the duty of any such user or integrator to perform the appropriate and complete risk analysis, evaluation and testing of the products with respect to the relevant specific application or use thereof. Neither Schneider Electric nor any of its affiliates or subsidiaries shall be responsible or liable for misuse of the information contained herein. If you have any suggestions for improvements or amendments or have found errors in this publication, please notify us.

When devices are used for applications with technical safety requirements, the relevant instructions must be followed.

Failure to use Schneider Electric software or approved software with our hardware products may result in injury, harm, or improper operating results. Failure to observe this information can result in injury or equipment damage.

You agree not to reproduce, other than for your own personal, noncommercial use, all or part of this document on any medium whatsoever without permission of Schneider Electric, given in writing. You also agree not to establish any hypertext links to this document or its content. Schneider Electric does not grant any right or license for the personal and noncommercial use of the document or its content, except for a non-exclusive license to consult it on an "as is" basis, at your own risk. All other rights are reserved.

All pertinent state, regional, and local safety regulations must be observed when installing and using this product. For reasons of safety and to help ensure compliance with documented system data, only the manufacturer should perform component repairs.

Structure your asset library

Asset library tree structure is crucial. When you register an asset, you can define its parent in the structure by creating a site, an equipment or a folder for each asset.

For instance:
[Site/Switchboard/asset](#)

Note that folder's purpose is only to classify the equipment into the tree structure and that EcoStruxure™ Facility Expert limits hierarchy to 5 levels maximum.

Apply easily location of parent asset to all sub-assets.
Change on parent asset address can be immediately applied on child assets.

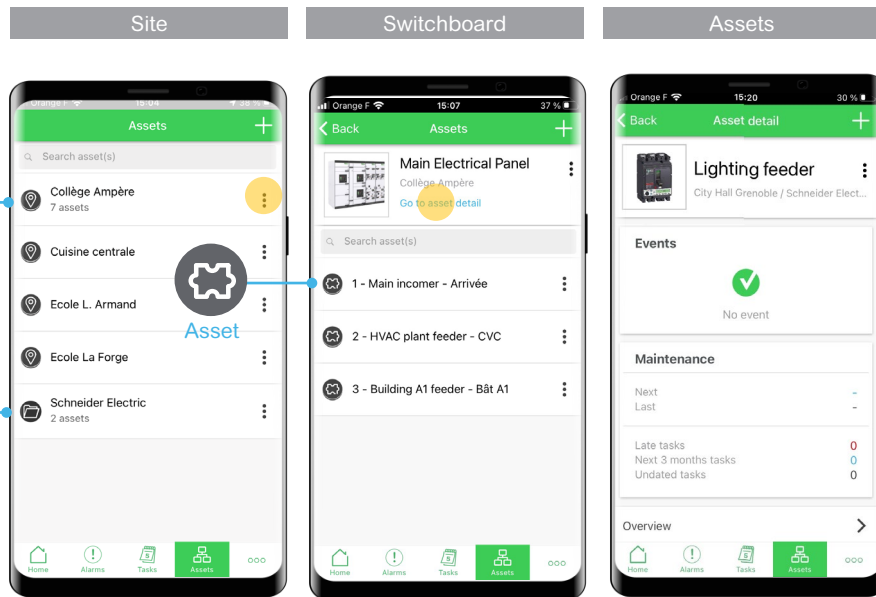

To avoid creating maintenance tasks for similar equipment you can simply **duplicate an asset** with all its associated maintenance plan. Tasks periodicity and actions list will be kept, but not the contributor assignment or other attached documents (pictures, description etc...) as they are contextual information and asset specific.

Structure your asset library

Asset library tree structure is crucial. When you register an asset, you can define its parent in the structure by creating a site, an equipment or a folder for each asset.

For instance:

[Site/Switchboard/asset](#)

Note that folder's purpose is only to classify the equipment into the tree structure and that EcoStruxure™ Facility Expert limits hierarchy to 5 levels maximum.

Apply easily location of parent asset to all sub-assets. **Change on parent asset address can be immediately applied on child assets.**

To avoid having to create maintenance tasks for similar equipment you can simply **duplicate an asset** within all its associated maintenance plan.

Tasks, periodicity and actions list will be kept, but not the contributor assignment or other attached documents (pictures, description etc...) as they are contextual information and asset specific.

2

For each parent you visualize the quantity of related sub-assets

3

You can click on "..." to access to the parent information (customer / site / switchboard...) or to duplicate/delete it.

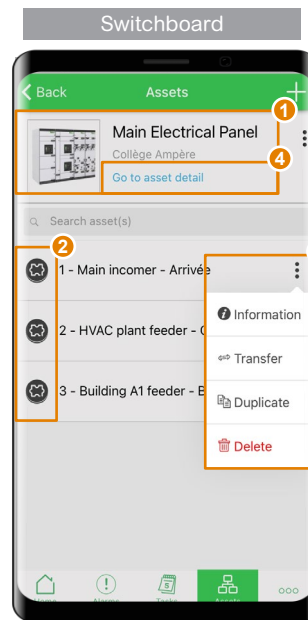

Doing so, all the related equipment – if existing – will be duplicated or deleted

4

Navigate to sub-assets just by clicking on the line. Without sub-assets you directly access to the equipment details

1

Access to the parent information

Customize maintenance template for 3rd party assets

1

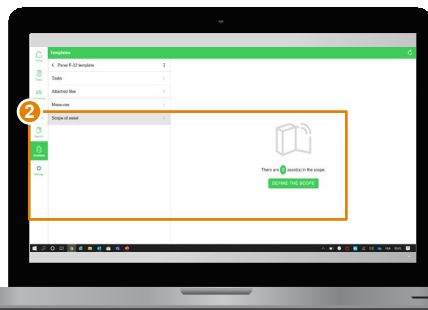

Access the new **"template"** tab from
Facility Expert web application

For each new custom template:

- Enter the template name
- Detail the maintenance plan: tasks, actions, reminders
- Add attachments
- And set manual readings

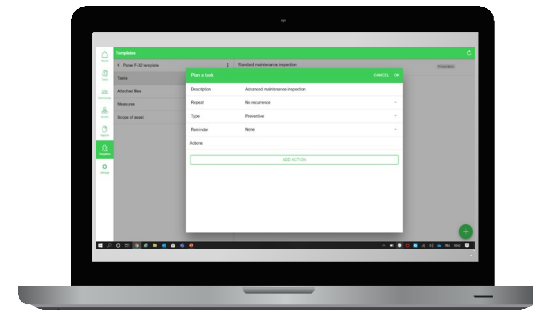

You can apply
Schneider Electric
preconfigured templates
OR
custom templates from
your library

2

Select the **scope** of your existing
assets to apply this template

Note: once the template is
applied on your assets, you
can not modify or delete tasks
and attachments.

3

Then, you will be able to **update an existing
template** already applied to a batch as assets

4

Or to **modify the scope of assets**
associated to a template

Retrieve Schneider Electric product information
in your App by scanning product QR code

EcoStruxure platform Capabilities simplify the discovery and onboarding of an increasing number of Schneider Electric products that are configured to communicate in a simple way with EcoStruxure™ Facility Expert.

Note: Note that QR code image itself can't be imported. To get the best of your App by sharing history of intervention, maintenance plans, attachments etc. with your community, you should generate a QR code from your App and stick it on the asset.

By scanning the Schneider Electric QR code on the asset you can quickly transfer its characteristics and related documents:

- **Asset nameplate with picture, reference, serial number and brand**
- **Technical documentation:** user and maintenance guides, single line diagram or drawings
- **Maintenance plan**

Consult the list of pre-defined models
available for Schneider Electric
MV/LV products

Retrieve information on your asset or switchboard in your App by scanning a panel QR created with EcoStruxure Power Commission

If a QR code had been created with EcoStruxure Power Commission and placed on the switchboard during its conception phase, you can scan it with your app and request an access to all the information you need to operate and maintain your electrical facility.

**Design docs:**

- Single line diagram
- Selectivity setting

Switchboard docs:

- CAD Drawings
- Switchboard photos
- User manual
- Wiring schema
- Bill of material
- Device serial number

Commissioning docs:

- Device password
- IT network configuration
- EcoStruxure Power Commission project report & test report

Maintenance docs:

- Maintenance plan
- Maintenance guide
- Spare part lists

How it works

1

With EcoStruxure Power Commission, Panel Builders commission the switchboard and create QR code

Set up and test all the connected devices in your electrical panel with EcoStruxure Power Commission.

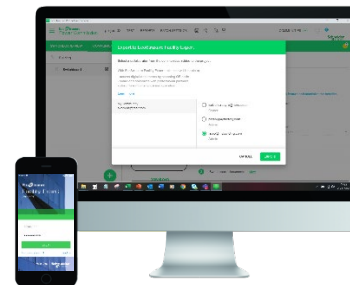

QR code is the unique identifier of the switchboard, for immediate collaboration and access to upload historical information of the equipment.

2

Then, they export the project to EcoStruxure Facility Expert to share it with collaborators from their communities.

Share the project with EcoStruxure Power Commission and seamlessly export the data to EcoStruxure Facility Expert.

NOTE: Enter customer and site node information of a switchboard in EcoStruxure Power Commission and retrieve the asset hierarchy in EcoStruxure Facility Expert.

Introduction: EcoStruxure™ Facility Expert, non connected and connected features

**CLOUD TECHNOLOGY HELPS YOU MAINTAIN YOUR NON-CONNECTED ASSET THANKS TO:**

- Asset and switchboard information available from the field through QR code
- Maintenance status and localization immediately
- Edition and automatic storage of intervention reports
- Actionable task manager with long term maintenance schedules & reminders
- Collaboration features

Using digital logbook and task manager free features of EcoStruxure™ facility Expert helps you improve asset maintenance on your installed base and support your day-to-day efficiency.

IN ADDITION, IoT TECHNOLOGY CONNECTS YOU TO YOUR EQUIPMENT AND BUILDINGS 24/7 TO:

- Monitor remotely all your electrical, HVAC or key equipment installed in single or multisite buildings
- Better anticipate operations with data trends on assets
- Receive smart alerts with actionable data 24/7

EcoStruxure™ Facility Expert – operations helps you improve your customers' business continuity and opens new service offering opportunities.

Service Activation for PrismaSet Active wireless panel server

The Voltage loss alert solution from EcoStruxure™ Power provides Facility Managers with local and remote visibility if an electrical outage or abnormal voltage phase conditions have occurred.

It makes voltage status inspection faster and diagnosis more efficient than ever, preventing equipment damage, and helping the operation team to respond without delay.

Native Connectivity for Power Availability application helps you minimize business disruption in event of electrical outage.

- 1 Built-in wireless panel server
- 2 LED indicators: Phase status (on/off)
- 3 QR Code to activate your free alerts
- 4 EcoStruxure™ Facility Expert communication status indicator

- Service is activated on cloud-based software
- Service is not activated (blinking)

Commission other Schneider Electric gateways: smart assets and Com'X gateway

By connecting your equipment you are able to:

- Collect information to monitor equipment status change or trends for one or more buildings
- Optimize your alerts: preconfigured, customs, data trending (T°C, running hours, voltage, current)
- Be alerted with actionable data directly on your mobile device
- Plan intervention regarding the emergency: create and assign new task or post-pone maintenance

Be aware that EcoStruxure Facility Expert is not suitable for any other application areas

There are different modes to collect data of your connected assets:

- For smart assets with HTTPS and email capability (machine to machine mode)
- By commissioning a Schneider Electric Gateway such as Com'X or PowerTag Link C

For data logger commissioning refer to EcoStruxure Power commissioning guide

schneider-electric.com

Issue can also be raised **manually** from the field by changing the asset status accordingly.

[▶ Learn how to "Report an asset-related issue"](#)

To get the best of your connected assets by receiving alerts, you should subscribe to EcoStruxure™ Facility Expert – Operations.

SUMMARY

APPENDIX

Introduction: what is a log, what is an issue?

When operating on site, you can create a log to describe and store intervention data.

A log will trace actions performed in relation to an asset and store them in the asset log history. You can complete information, readings or attach a file to detail the log.

While working on site you detect an event that requires intervention, but you do not necessarily have time or competency to solve it.

In this situation, you can report an asset-related issue, and if you are the team manager, schedule and assign this new task to solve the event.

Manual readings can be logged and associated to an asset

You can easily collect readings in the field with your EcoStruxure™ Facility Expert mobile App.

- Click on shortcut **"New reading"** on quick access interface

- Choose the asset or the meter – Only assets created with manual reading will be displayed

- Visualize the last value collected and manually enter the new one – It's done!

- Click **"OK"** to confirm. You can also delete readings if required

- You can create several measurements per asset
- You cannot modify the creation date of the manual entry
- You can view the measurement list in the "History" section on each device

Generate reports Introduction

EcoStruxure™ Facility Expert helps you to ensure maintenance traceability and to prove compliance with applicable regulations to your customers by generating intervention or summary reports.

In a single click you can generate detailed reports in the field and thus, reduce administrative tasks and demonstrate that the job is done.

MAIN INFORMATION OF YOUR SUMMARY REPORT ARE:

- **Key figures**
 - Assets status at generation date
 - Logs details over the period (number of inspections, total duration, number of contributors)
 - Main alerts/alarms KPI
- **Asset synthesis**
 - Site details
 - Logs over the period (asset, log description, date, status, duration)
 - Late/upcoming maintenance tasks of the next 3 months (asset, task, date)
 - Measures (asset, measure, date, value)

SUMMARY REPORT

KEY FIGURES
from 07/06/2019 to 07/06/2020

Assets status on 07/06/2020

Assets over the period: 3 Asset(s)

Logs over the period: 2

Alarms over the period: 1

MAIN INFORMATION OF YOUR INTERVENTION REPORT ARE:

- **Asset nameplate** (name, address, type, asset type, brand, model, reference, serial number, commissioning date, lifetime, firmware, asset id)
- **Log details** (contributor, company, date, hour, time spent attachments, description)
- **List of tasks done**

Introduction

With EcoStruxure™ Facility Expert, you get the insurance that your assets are covered under a proactive and digital maintenance program including automatic reminders that helps improve your maintenance efficiency.

Monitoring 24/7 your equipment condition, you can even go further leveraging a cost-efficient and simple technology that enables you to be alerted wherever you are when issues arise, receive actionable data to analyze the problems, or to anticipate maintenance needs by reviewing your key assets trends.

As a result, you limit the risk of business disruption and equipment damages, and you can plan your operations wisely by taking the best of your app to manage facilities more efficiently than ever.

Maintenance reminders

Alert/alarm notifications

Upon network availability, be notified from your connected assets through:

- Preconfigured alarms with Schneider Electric equipment
- Manual settings for custom alarms on threshold

The Voltage loss alert service provides commercial and industrial building managers and technicians with local and remote visibility in case of electrical outage or abnormal voltage phase conditions. It makes voltage status inspection faster and diagnosis more efficient than ever, preventing equipment damage, and helping them to respond without delay.

PrismaSet Active features

At the top of your panel one or all the 3 indicator phases lights are off, indicating a voltage loss event.

If the LORA connectivity is not working, the communication status indicator flashes orange instead of solid green.

- Service is activated on cloud-based software
- Service is not activated (blinking)

Implementing PowerLogic HeatTag sensor into PrismaSet Active helps prevent damage in electrical cabinets from overheating by analyzing gases and particles emitted by cable sheaths in case of abnormal temperature rises. The solution monitors switchboard conditions 24/7 and sends alerts, helping operations team react quickly and anticipate on-site interventions.

PowerLogic HeatTag:
Wireless sensor for early detection of overheating cables

Switchboard condition analysis

- Receive notification for functional issues in HeatTag devices
- Analyzes gases and micro-particles emitted by overheating cable
- 3 level of alerts depending on severity
- Measures ambient temperature and hygrometry
- Provides switchboard air quality index

Sensor self-diagnosis

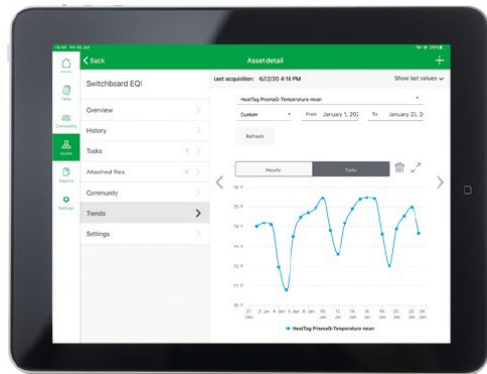

- Fan maintenance alert
- Sensor health alert

Remote alarms 24/7 on EcoStruxure Facility Expert

The asset manager receives remote alerts with actionable details

Can access detailed dashboard for continuous monitoring and trends to analyze switchboard condition.

Other example of asset event alarms

EcoStruxure™ Power solutions based on smart Schneider sensors, connected products and cloud-based software enable Facility Manager and operations teams to be alerted 24/7, monitor key equipment and gain visibility on energy consumption, from loads to entire building.

PowerTag Energy

Wireless sensor for load management and asset protection

These wireless power sensors provide high-density energy metering for easy load management and asset protection. They can differentiate between lighting, cooking, and HVAC usage and inform on circuit breaker trips and usage alarms.

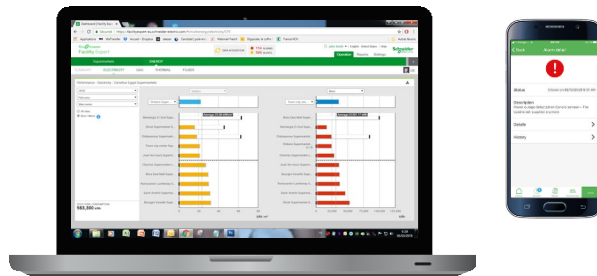

PowerTag Ambient

Wireless sensor for temperature monitoring

These wireless temperature sensors are battery powered and are suited to installation in refrigerated environments (down to -30°C) such as cold rooms or self-contained coolers.

Remote alarms 24/7 on EcoStruxure Facility Expert

Remote alarms with actionable details

- Alerts on power outage with causes identification and recommendations
- Notification on mobile devices
- Load condition monitoring
- New PowerTag installation after service activation in PrismaSet Active

3

Then click on the alarm itself to change
the issue status

4

According to alarm severity you can:

- a** "Acknowledge" the issue to inform your team that the issue has been taken into account
- b** "Plan a task" and assign it to the right technician
- c** Or "Close" the issue

- More than **50% of breakdowns** for a piece of equipment have already occurred and the causes are known.
- When a task is planned, EcoStruxure™ Facility Expert will automatically propose to close the issue once the task is completed.

Access asset history

Equipment maintenance logs provide rich historical data that can be analyzed to provide insights on an asset's performance compared to similar devices. In addition, keeping maintenance logs updated is proof that assets are being taken care of.

In asset detail:

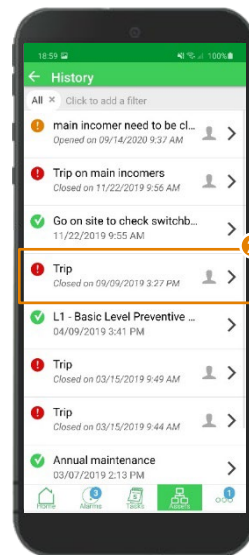

1

Scroll down to access
"History" tab and click

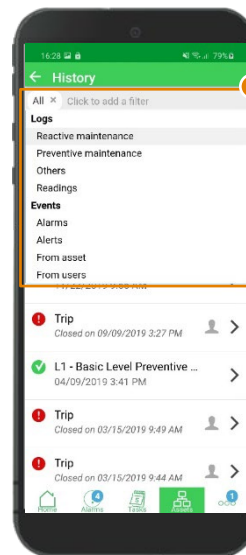

2

In the list, select the historical
record you are looking for

3

Or filter to access the data you
need by using relevant tags:

You can activate several
tags as required

- Preventive maintenance
- Reactive maintenance
- Inspection
- Manual readings
- Alarms / alerts from connected assets
- Alarms / alerts raised manually by users

Monitor and control HVAC equipment

With the connection of the room controllers SE8000, EcoStruxure Facility Expert provides monitoring and control of RoofTop Units (RTU). Simplified views for building manager, enable them to ensure easily comfort in the zones of the facility. Advanced views for maintenance teams or mechanical contractors, to avoid them going on site by checking and modifying remotely setpoints/parameters of the machine.

In addition to all maintenance features, operating the HVAC equipment with EcoStruxure Facility Expert allows you to remotely:

- Visualize temperatures, setpoints, humidity and CO2 levels on trends
- Control comfort parameters of a zone and configuration parameters of the room controller
- Modify the schedule of the rooftop operating sequence (occupied, unoccupied periods)
- Visualize quickly the rooftop unit operating conditions on a graphic
