

VWG-APP-1045 Wireless Serial Adapter

VWG-APP-1045 Features

Introduction

The VWG-APP-1045 wireless communication card can help you secure new automation projects and retrofit opportunities in all of the following markets:

- Portable classrooms
- University dorm room upgrades
- K12 classrooms
- Hotel and hospitality
- Office buildings
- Churches
- National accounts – retail stores, bank chains, etc.

Wireless serial adapter for TAC I/A Series JACE-200/600/700

The VWG-APP-1045 wireless communication card has been primarily designed to target retrofit opportunities. It is ideally suited for use in situations where the installation of new communicating field bus wiring within an existing building space is not feasible due to excessive installation costs or physical obstacles.

Now the VWG-APP-1045 wireless communication card and associated SE7000 Series wireless temperature controllers can dramatically reduce project installation time and costs by reusing the existing wiring between the electronic controller and terminal equipment. The HVAC automation industry will now benefit from an increased rate of return on investment like never before.

The VWG-APP-1045 wireless card, when used in conjunction with the SE7000 Series wireless temperature controllers, provides a very simple integration into the TAC I/A Series (JACE-200/600/700).

AT A GLANCE

Features and benefits

- Uses standard TAC I/A Series tuning policies
- Uses standard TAC I/A Series device and object health indexes
- Uses standard TAC I/A Series device and object manager
- Uses all standard workbench features such as alarming, graphics, and trends
- Enables recycling of your existing device templates

VWG-APP-1045 Applications

Typical wireless mesh network

The recommended maximum number of wireless controllers per JACE is 50
